How will FLAIR® Strips protect my horse and impact performance?

- *By Breathing Easier:* Horses wearing FLAIR Strips spend less energy breathing in oxygen, which enables them to expend more energy on performing. Horses wearing FLAIR Strips have been shown to use significantly less energy (5% to 8%) during intensive exercise.

- *By Reducing Fatigue:* FLAIR Strips can increase horses' stamina allowing them to perform longer before becoming fatigued. Fatigue is known to contribute to breakdowns, such as fractures, bowed tendons and suspensory injuries.

- *By Reducing Lung Bleeding:*
It is now well known that most horses experience some degree of exercise induced pulmonary hemorrhage (EIPH) or "bleeding" in the lungs during intensive exercise. Rarely is bleeding visible externally; it occurs in the lungs. Repeated episodes of bleeding irritates the lungs and can lead to inflammation, scarring and possibly permanent lung damage. FLAIR Strips are proven to reduce bleeding during intensive exercise, keeping lungs healthier.

- *By Recovering Quicker:* Horses wearing FLAIR Strips recover quicker after exercise, so they are ready to perform again sooner. Many trainers and riders report that their horses are more relaxed and focused when wearing FLAIR Strips.

Information supporting the proven benefits of FLAIR Strips is available at www.flairstrips.co.nz

Practice Optimum Respiratory Management

Make FLAIR® Strips an integral part of your equine health program to maximize performance and protect the long-term health of your horse.
